TITLE: Thermoplastic resin surface protective
film contg.

antistatic agent - comprises
thermoplastic resin film
base, tacky adhesive layer and
antistatic agent,
preventing high static voltage when
bonding or peeling
protective film

ABSTRACTED-PUB-NO: JP 04292943A

BASIC-ABSTRACT:

The film is composed of a thermoplastic resin film base material, and a tacky adhesive layer (formed on one side of the base material. Newly, 0.22 pts. wt. (based on 100 pts. wt. of the base resin of an anti-static

agent is added.

A low density PE 100 pts. wt. and a surfactant as the antistatic agent, 0.25 pts. wt. for the base material, and an ethylene-vinyl acetate copolymer for the tacky adhesive layer are co-extrusion moulded to produced the surface protective film.

UDE/ADVANTAGE - For damage-prevention and anti-soiling for synthetic resin boards, decorative boards, metal sheets, etc. while they are processsed, transported, etc. The voltage of the charged film when the film is bonded to and then peeled from a synthetic resin board with high insulation properties can be controlled to be low. The reduction in bodning strength, residue of the adhesive, and bleeding out of the anti-static agent are eliminated. The surface is inhibited from being soiled.
